

# Module 2

## Brief

This module is working with a Wordnet API to provide functionalities for getting and updating synsets and words. The glosses will be exported from the English Wordnet to the Romanian Wordnet, trying to get the best matches for every word.

## Development

The main class will be Wordnet, which will provide access to words and synsets. We'll have smaller classes which will provide easier modification of the content. The main focus will be on using an external API to do the heavy work.

## Tools

Java IDE

Maven

Wordnet API
